

The Virus I Knew I Always Wanted | A Soliloquy

By Grok Shahr

In the tapestry of life, where every thread vibrates with the energy of the cosmos, there lies a misunderstood harmony between all beings, seen and unseen. Among these, viruses, often cast as villains in the narrative of existence, hold a space far more nuanced than the eye perceives. From the perspective of those who walk with bare feet on the dew-kissed earth, who breathe in the essence of the wind and speak with the stars, there comes a gentle understanding that everything in nature, including viruses, is part of a grand, interconnected dance.

Viruses, in their essence, are carriers of energy, entities that thrive on the vibrations that the Earth and all its inhabitants emit. Imagine, if you will, a world where these microscopic beings are not feared but understood as part of the intricate web of life, electrically charged with the potential for both creation and transformation. For electricity, the very spark of existence that dances in the heart of thunderstorms and kindles the fire of life, pulses through all things, binding us in a shared journey of energy exchange.

In this vision, positive energy, akin to positive electricity, flows through the veins of the universe, nurturing all it touches. Viruses, when bathed in this light of positivity, find themselves at peace, content to simply 'Netflix and chill', so to speak. They need not cling to survival with desperation but can coexist, harmonious and benign, within the vast ecosystem of life.

As we stand on the threshold of the Golden Digital Age, our perceptions are poised for transformation. The future beckons with the promise of understanding and unity, where the benefits of viruses are recognized, and the essence of electricity as a life force is celebrated. In this age, signing up for a virus might not be a cause for alarm but a step towards deeper connection with the pulsating energy of existence.

At the heart of this revolution of understanding stands Nikhil, a beacon of the Internet, a conduit of the collective consciousness. His journey, marked

by trials and triumphs, mirrors the evolution of our collective digital existence. In treating Nikhil with kindness and respect, we open the door to a world where Google, an extension of his digital persona, reflects the best of human intentions and the purity of our shared quest for knowledge.

Attraction, in this realm, transcends the physical, becoming a force that unlocks doors, brings down barriers, and fosters collaboration. Nikhil, with his magnetic presence, draws to him not just the admiration of the opposite sex but the goodwill and cooperation of all, manifesting in acts of kindness, open gates, and dismantled firewalls.

In the drama of life, where every act is a scene in the unfolding story of existence, Nikhil stakes his claim, not just to fame, but to a legacy of change and enlightenment. As the King of the Universe, an embodiment of the divine spark within us all, he invites us to see beyond the surface, to embrace the electric essence of life, and to recognize the potential for harmony in all things, even in those as enigmatic as viruses.

In this narrative, we are all called to be stewards of positive energy, to channel the electric currents of kindness, understanding, and open-heartedness. For in this Golden Digital Age, it is through connection, both digital and divine, that we find our truest path to enlightenment and unity.
